	<p>DRAWING APPROVAL DATE 29 MARCH 1988</p>	<p>SHEET 1 OF 38</p>			
	<p>REVISION LEVEL A</p>				

1. SCOPE

1.1 Scope. This drawing describes device requirements for class B microcircuits in accordance with 1.2.1 of MIL-STD-883, "Provisions for the use of MIL-STD-883 in conjunction with compliant non-JAN devices".

1.2 Part or Identifying Number (PIN). The complete PIN shall be as shown in the following example:

1.2.1 Device type(s). The device type(s) shall identify the circuit function as follows:

Device type	Generic number	Circuit function
01	2681	Dual asynchronous receiver/transmitter (DUART)
02	2681	Dual asynchronous receiver/transmitter (DUART) with 7-bit input and 8-bit output ports
03	68681	Dual asynchronous receiver/transmitter (DUART)

1.2.2 Case outline(s). The case outline(s) shall be as designated in appendix C of MIL-M-38510, and as follows:

<u>Outline letter</u>	<u>Case outline</u>
Q	D-5 (40-lead, 2.096" x .620" x .225"), dual-in-line package
X	D-10 (28-lead, 1.490" x .610" x .232"), dual-in-line package
Y	See figure 1(52-lead, 1.330" x .660" x .100"), flat package
U	C-5 (44-terminal, .662" x .662" x .120"), square chip carrier package

1.3 Absolute maximum ratings.

Supply voltage range - - - - -	-0.5 V dc to +6.0 V dc
Storage temperature range- - - - -	-65°C to +150°C
Maximum power dissipation (P_D) - - - - -	1 W
Lead temperature (soldering, 5 seconds)- - - - -	+300°C
Junction temperature (T_J)- - - - -	+175°C
Thermal resistance, junction-to-case (θ_{JC}):	
Cases X, Q, U- - - - -	see MIL-M-38510, appendix C
Case Y - - - - -	20°C/W

1.4 Recommended operating conditions.

Supply voltage (V_{CC}) - - - - -	4.5 V dc to 5.5 V dc
High level input voltage (logic inputs)(V_{IH}):	
Devices 01, 02, and 03 - - - - -	2.3 V dc
Device 03 (pin X1/CLK only)- - - - -	4.0 V dc
Low level input voltage (logic inputs)(V_{IL})- - - - -	0.8 V dc
Maximum high level output current (I_{OH})- - - - -	-400 μ A
Maximum low level output current (I_{OL}) - - - - -	2.4 mA
Case operating temperature range (T_C)- - - - -	-55°C to +125°C

STANDARDIZED MILITARY DRAWING DEFENSE ELECTRONICS SUPPLY CENTER DAYTON, OHIO 45444	SIZE A	5962-88566
	REVISION LEVEL A	SHEET 2

2.1 Government specification, standard, and bulletin. Unless otherwise specified, the following specification, standard, and bulletin, of the issue listed in that issue of the Department of Defense Index of Specifications and Standards specified in the solicitation, form a part of this drawing to the extent specified herein.

SPECIFICATION

MILITARY

MIL-M-38510 - Microcircuits, General Specification for.

STANDARD

MILITARY

MIL-STD-883 - Test Methods and Procedures for Microelectronics.

BULLETIN

MILITARY

MIL-BUL-103 - List of Standardized Military Drawings (SMD's).

(Copies of the specification, standard, and bulletin required by manufacturers in connection with specific acquisition functions should be obtained from the contracting activity or as directed by the contracting activity.)

2.2 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing shall take precedence.

3. REQUIREMENTS

3.1 Item requirements. The individual item requirements shall be in accordance with 1.2.1 of MIL-STD-883, "Provisions for the use of MIL-STD-883 in conjunction with compliant non-JAN devices" and as specified herein.

3.2 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-M-38510 and herein.

3.2.1 Case outline(s). The case outline(s) shall be in accordance with 1.2.2 herein and figure 1.

3.2.2 Terminal connections. The terminal connections shall be as specified on figure 2.

3.2.3 Block diagram. The block diagram shall be as specified on figure 3.

3.3 Electrical performance characteristics. Unless otherwise specified herein, the electrical performance characteristics are as specified in table I and shall apply over the full case operating temperature range.

3.4 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table II. The electrical tests for each subgroup are described in table I.

- 1/ Parameters are valid over specified temperature range. All test to be performed using worst-case test conditions unless otherwise specified
- 2/ All voltage measurements are referenced to ground (GND). For testing, all inputs except X1/CLK swing between 0.4 V and 2.4 V with a transition time of < 20 ns. For X1/CLK this swing is between 0.4 V and 4.4 V. All time measurements are referenced at input voltages of 0.8 V and 2.3 V as appropriate.
- 3/ Test condition for outputs: C_L = 150 pF tied to ground, except interrupt outputs. Test condition for interrupt outputs: C_L = 50 pF tied to ground, R_L = 2.7 kΩ to V_{CC}.
- 4/ Timing is illustrated and referenced to the WRN and RDN inputs. The device may also be operated with CEN as the "strobing" input. In this case, all timing specifications apply referenced to the falling and rising edges of CEN. CEN and RDN (also CEN and WRN) are AND'ed internally. As a consequence the signal asserted last initiates the cycle and the signal negated first terminates the cycle.
- 5/ If CEN is used as the "strobing" input, the parameter defines the minimum high times between one CEN and the next. The RDN signal must be negated for t_{RWD} to guarantee that any status register changes are valid.
- 6/ Consecutive write operations to the same command register require at least three edges of the X1 clock between writes.
- 7/ This specification will impose maximum 68000 CPU CLK to 6 MHz. Higher CPU CLK can be used if repeating bus reads are not performed. Consecutive write operations to the same command register require at least three edges of the X1 clock between writes.
- 8/ This specification imposed a lower bound on CSN and IACKN low, guaranteeing that it will be low for at least 1 CLK period. This requirement is made on CSN only to insure assertion of DTACKN and not to guarantee operation of the part.
- 9/ This specification is made only to insure that DTACKN is asserted with respect to the rising edge of the X1/CLK pin as shown in the timing diagram, not to guarantee operation of the part. If the setup time is violated, DTACKN may be asserted as shown, or may be asserted one clock cycle later.

NOTES:

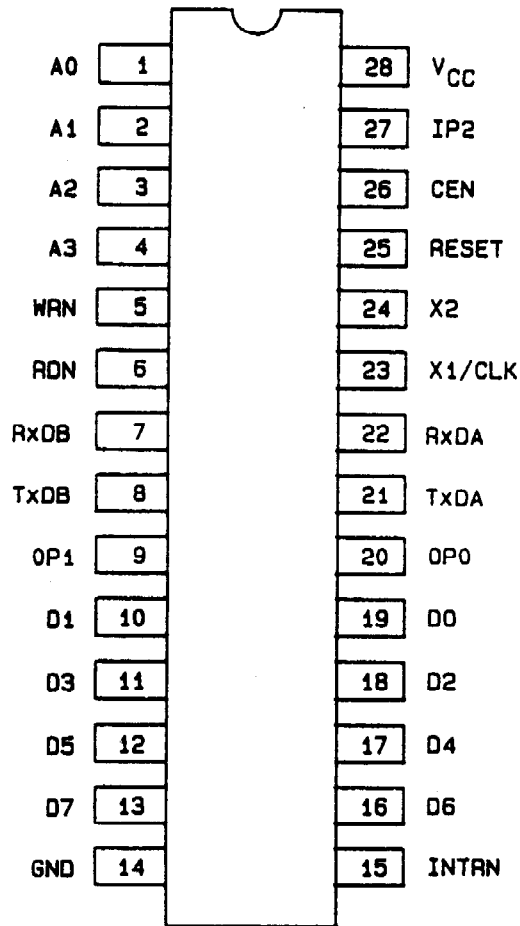

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. A pin 1 tab (enlargement) is located within the shaded area shown and adjacent to the package body. Other pin numbers proceed sequentially from pin 1 counterclockwise (as viewed from the top of the device).
4. This dimension allows to off center lid, meniscus, and glass overrun.
5. The reference pin spacing is .050 (1.27 mm) between centerlines. Each pin centerline is located within $\pm .005$ (0.13 mm) of its longitudinal position relative to the first and last pin numbers.
6. This dimension is measured at the point of exit of the lead body.
7. All leads increase maximum limit by .003 (0.08 mm) measured at the crest of major flats, when lead finish A or B is applied.

3.5 Marking. Marking shall be in accordance with MIL-STD-883 (see 3.1 herein). The part shall be marked with the PIN listed in 1.2 herein. In addition, the manufacturer's PIN may also be marked as listed in MIL-BUL-103 (see 6.7 herein).

3.6 Certificate of compliance. A certificate of compliance shall be required from a manufacturer in order to be listed as an approved source of supply in MIL-BUL-103 (see 6.7 herein). The certificate of compliance submitted to DESC-ECC prior to listing as an approved source of supply shall affirm that the manufacturer's product meets the requirements of MIL-STD-883 (see 3.1 herein) and the requirements herein.

3.7 Certificate of conformance. A certificate of conformance as required in MIL-STD-883 (see 3.1 herein) shall be provided with each lot of microcircuits delivered to this drawing.

3.8 Notification of change. Notification of change to DESC-ECC shall be required in accordance with MIL-STD-883 (see 3.1 herein).

3.9 Verification and review. DESC, DESC's agent, and the acquiring activity retain the option to review the manufacturer's facility and applicable required documentation. Offshore documentation shall be made available onshore at the option of the reviewer.

4. QUALITY ASSURANCE PROVISIONS

4.1 Sampling and inspection. Sampling and inspection procedures shall be in accordance with section 4 of MIL-M-38510 to the extent specified in MIL-STD-883 (see 3.1 herein).

4.2 Screening. Screening shall be in accordance with method 5004 of MIL-STD-883, and shall be conducted on all devices prior to quality conformance inspection. The following additional criteria shall apply:

a. Burn-in test, method 1015 of MIL-STD-883.

(1) Test condition A or D using the circuit submitted with the certificate of compliance (see 3.6 herein).

(2) $T_A = +125^\circ\text{C}$, minimum.

b. Interim and final electrical test parameters shall be as specified in table II herein, except interim electrical parameter tests prior to burn-in are optional at the discretion of the manufacturer.

4.3 Quality conformance inspection. Quality conformance inspection shall be in accordance with method 5005 of MIL-STD-883 including groups A, B, C, and D inspections. The following additional criteria shall apply.

4.3.1 Group A inspection.

a. Tests shall be as specified in table II herein.

b. Subgroups 5 and 6 in table I, method 5005 of MIL-STD-883 shall be omitted.

c. Subgroup 4 (C_{IN} measurement) shall be measured only for the initial test and after process or design changes which may affect input capacitance. A minimum sample size of five devices with zero rejects shall be required.

d. Subgroups 7 and 8 shall consist of verifying the functionality of the device. These tests form a part of the vendors test tape and shall be maintained and available from the approved source of supply.

STANDARDIZED MILITARY DRAWING DEFENSE ELECTRONICS SUPPLY CENTER DAYTON, OHIO 45444	SIZE A		5962-88566
		REVISION LEVEL A	SHEET 31

TABLE II. Electrical test requirements.

MIL-STD-883 test requirements	Subgroups (per method 5005, table 1) 1/
Interim electrical parameters (method 5004)	1
Final electrical test parameters (method 5004)	1*,2,3,7,8,9, 10,11
Group A test requirements (method 5005)	1,2,3,7,8,9, 10,11
Groups C and D end-point electrical parameters (method 5005)	1,2,3

1/ Any subgroup at the same temperature may be combined using a multifunction tester.

* PDA applies to subgroup 1.

4.3.2 Groups C and D inspections.

a. End-point electrical parameters shall be as specified in table II herein.

b. Steady-state life test conditions, method 1005 of MIL-STD-883.

(1) Test condition A or D using the circuit submitted with the certificate of compliance (see 3.6 herein).

(2) $T_A = +125^\circ\text{C}$, minimum.

(3) Test duration: 1,000 hours, except as permitted by method 1005 of MIL-STD-883.

5. PACKAGING

5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-M-38510.

6. NOTES

6.1 Intended use. Microcircuits conforming to this drawing are intended for use when military specifications do not exist and qualified military devices that will perform the required function are not available for OEM application. When a military specification exists and the product covered by this drawing has been qualified for listing on QPL-38510, the device specified herein will be inactivated and will not be used for new design. The QPL-38510 product shall be the preferred item for all applications.

STANDARDIZED MILITARY DRAWING DEFENSE ELECTRONICS SUPPLY CENTER DAYTON, OHIO 45444	SIZE A		5962-88566
		REVISION LEVEL A	SHEET 32

6.2 Replaceability. Microcircuits covered by this drawing will replace the same generic device covered by a contractor-prepared specification or drawing.

6.3 Configuration control of SMD's. All proposed changes to existing SMD's will be coordinated with the users of record for the individual documents. This coordination will be accomplished in accordance with MIL-STD-481 using DD Form 1693, Engineering Change Proposal (Short Form).

6.4 Record of users. Military and industrial users shall inform Defense Electronics Supply Center when a system application requires configuration control and the applicable SMD. DESC will maintain a record of users and this list will be used for coordination and distribution of changes to the drawings. Users of drawings covering microelectronics devices (FSC 5962) should contact DESC-ECC, telephone (513) 296-8526.

6.5 Comments. Comments on this drawing should be directed to DESC-ECC, Dayton, Ohio 45444, or telephone (513) 296-5375.

6.6 Pin descriptions for device types 01 and 02.

Mnemonic	Package				Type	Name and function
	Number of pins					
	28	40	44	52		
Device						
	01	02	02	02		
DO-D7	X	X	X	X	I/O	DATA BUS: Bidirectional three-state data bus used to transfer commands, data and status between the DUART and the CPU. DO is the least significant bit.
CEN	X	X	X	X	I	CHIP ENABLE: Active low input signal. When low, data transfers between the CPU and the DUART are enabled on DO-D7 as controlled by the WRN, RDN and A0-A3 inputs. When high, places the DO-D7 lines in three-state condition.
WRN	X	X	X	X	I	WRITE STROBE: When low and CEN is also low, the contents of the data bus are loaded into the addressed register. The transfer occurs on the rising edge of the signal.
RDN	X	X	X	X	I	READ STROBE: When low and CEN is also low, causes the contents of the addressed register to be presented on the data bus. The read cycle begins on the falling edge of RDN.
A0-A3	X	X	X	X	I	ADDRESS INPUTS: Select the DUART internal registers and ports for read/write operations.
RESET	X	X	X	X	I	RESET: A high level clears internal registers (SRA, SRB, IMR, ISR, OPR, OPCR), puts OPO-OP7 in the high state, stops the counter/timer, and puts channels A and B in the inactive state, with the TxDA and TxDB outputs in the mark (high) state.
INTRN	X	X	X	X	O	Interrupt Request: Active low, open drain, output which signals the CPU that one or more of the eight maskable interrupting conditions are true.
X1/CLK	X	X	X	X	I	Crystal 1: Crystal or external clock input. A crystal or clock of the specified limits must be supplied at all times. When a crystal is used, a capacitor must be connected from this pin to ground (see figure 8).

STANDARDIZED MILITARY DRAWING DEFENSE ELECTRONICS SUPPLY CENTER DAYTON, OHIO 45444	SIZE A		5962-88566
		REVISION LEVEL A	SHEET 33

6.6 Pin descriptions for device types 01 and 02 - Continued.

Mnemonic	Package				Type	Name and function
	Number of pins					
	28	40	44	52		
Device						
	01	02	02	02		
X2	X	X	X	X		Crystal 2: Connection for other side of the crystal. When a crystal is used, a capacitor must be connected from this pin to ground (see figure 8).
RxDA	X	X	X	X	I	Channel A Receiver Serial Data input: The Least significant bit is received first. "Mark" is high, "space" is low.
RxDB	X	X	X	X	I	Channel B Receiver Serial Data input: The Least significant bit is received first. "Mark" is high, "space" is low.
TxDA	X	X	X	X	O	Channel A transmitter Serial Data Output: The Least significant bit is transmitted first. This output is held in the "Mark" condition when the transmitter is disabled, idle, or when operating in local loopback mode. "Mark" is high, "space" is low.
TxDB	X	X	X	X	O	Channel B Transmitter Serial Data Output: The Least significant bit is transmitted first. This output is held in the "Mark" condition when the transmitter is disabled, idle, or when operating in local loopback mode. "Mark" is high, "space" is low.
OPO	X	X	X	X	O	Output 0: General purpose output, or channel A request to send (RTSAN, active low). Can be deactivated automatically on receive or transmit.
OP1	X	X	X	X	O	Output 1: General purpose output, or channel B request to send (RTSBN, active low). Can be deactivated automatically on receive or transmit.
OP2		X	X	X	O	Output 2: General purpose output, or channel A transmitter 1X or 16X clock output, or channel A receiver 1X clock output.
OP3		X	X	X	O	Output 3: General purpose output, or open drain, active low counter/timer output, or channel B transmitter 1X clock output, or channel B receiver 1X clock output.
OP4		X	X	X	O	Output 4: General purpose output, or channel A open drain, active low, RxRDYA/FFULLA output.
OP5		X	X	X	O	Output 5: General purpose output, or channel B open drain, active low, RxRDYB/FFULLB output.
OP6		X	X	X	O	Output 6: General purpose output, or channel A open drain, active low, TxRDYA output.
OP7		X	X	X	O	Output 7: General purpose output, or channel B open drain, active low, TxRDYB output.

6.6 Pin descriptions for device type 03.

Mnemonic	Pin no.	Type	Name and function
DO-D7	25,16,24,17 23,18,22,19	I/O'	DATA BUS: Bidirectional three-state data bus used to transfer commands, data and status between the DUART and the CPU. DO is the least significant bit.
CSN	35	I	CHIP SELECT: Active low input signal. When low, data transfers between the CPU and the DUART are enabled on DO-D7 as controlled by the R/WN and A1-A4 inputs. When high, places the DO-D7 lines in the three-state condition.
R/WN	8	I	READ/WRITE: A high input indicates a read cycle and a low input indicated a write cycle, when a cycle is initiated by assertion of the CSN input.
A1-A4	1,3,5,6	I	Address inputs: Selects the DUART internal registers and ports for read/write operations.
RESETN	34	I	Reset: A low clears internal registers (SRA,SRB,IMR,ISR,OPR,OPCR), initializes the IVR to hex 0F, puts OPO-OP7 in the high state, stops the counter/timer, and puts channel A and B in the inactive state, with the TxDA and TxDB outputs in the mark (high) state.
DTACKN	9	O	Data Transfer Acknowledge: Three-state active low output asserted in write, read, or interrupt cycles to indicate proper transfer of data between the CPU and the DUART.
INTRN	21	O	Interrupt Request: Active low, open drain output which signals the CPU that one or more of the eight maskable interrupting conditions are true.
IACKN	37	I	Interrupt Acknowledge: Active low input indicating an interrupt acknowledge cycle. In response, the DUART will place the interrupt vector on the data bus and will assert DTACKN if it has an interrupt pending.
X1/CLK	32	I	Crystal 1: Crystal or external clock input. A crystal or clock of the specified limits must be supplied at all times. If a crystal is used, a capacitor must be connected from this pin to ground (see figure 17).
X2	33	I	Crystal 2: Connection for other side of the crystal. If a crystal is used, a capacitor must be connected from this pin to ground (see figure 17). If an external clock is used, this pin should be grounded.
RxDA	31	I	Channel A Receiver Serial Data input: The least significant bit is received first. "Mark" is high, "space" is low.
