Notes: (1) Inductance is measured at 100kHz, 0.1 Vrms, without DC current.

(2) Rated DC current at which inductance will be decreased by 10% from its initial value or the DC current at which $\Delta T = 40^\circ\text{C}$, whichever is smaller.

(3) Resistance is measured with both windings connected in parallel (case size 40 only).

(4) Rated current will be decreased by 50% when parts are connected as coupled inductors.
