

Product Description

RFMD's SXE-1089Z is a high performance pHEMT MMIC amplifier utilizing a patented self-bias Darlington topology housed in a lowcost, surface mountable SOT-89 package. The active bias network provides stable current over temperature and process threshold voltage variations. Designed to run directly from a 5V supply, the SXE-1089Z does not require a dropping resistor as compared to typical Darlington amplifiers. The SXE-1089Z product is designed for high linearity 5V gain block applications that require small size and minimal external components. It is internally matched to 50Ω.

Pin	Function	Description
1	RF IN	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
2, 4	GND	Connection to ground. Use via holes for best performance to reduce lead inductance as close to ground leads and achieve optimum RF performance.
3	RF OUT/BIAS	RF output and bias pin. DC voltage is present on this pin, therefore a DC blocking capacitor is necessary for proper operation.
